Icynene MD-C-200
Technical Product Data

MD-C-200
THERMAL INSULATION AND AIR BARRIER
ICC-ES ESR-3199

Specification Sections: 07 21 19 Foamed-in-Place Insulation, 07 27 00 Spray Polyurethane Foam Air Barriers

PRODUCT DESCRIPTION

Icynene MD-C-200 is a closed cell spray applied polyurethane foam insulation and air barrier material that can have an initial pass thickness of 4 inches. It is suitable for buildings built in accordance with the IRC and the IBC including Type I, II, III, IV and V construction. It delivers high value and Class II water vapor permeance required in certain climate zones. The product is for use as a thermal insulation and air barrier in:

- exterior walls as continuous insulation
- wall cavities
- floor assemblies
- ceiling assemblies
- attics (vented and unvented)
- crawl spaces (vented and unvented)
- foundation walls on the interior or exterior
- under floor slabs

BURN CHARACTERISTICS

| Surface Burning at 4 inches:          | ASTM E 84       | Class A                      |
| Flame Spread Index                    |                 |                              |
| Smoke Development                     |                 |                              |
| Commercial Fire Resistance            | NFPA 285        | Assembly Passed*             |
| Commercial Fire Resistance            | ASTM E 119      | 1,2 & 3 Hour Ratings*        |
| DC 315, No-Burn Plus ThB Thermal Barrier | NFPA 286       | > 15 minutes                 |
| Wall & Ceiling Application Maximum Thickness | AC377          | Walls - none Ceiling - none  |
| Attic & Crawl Space Walls & Roof Uncoated Thickness | AC377 Appendix X | Walls - 6” Roof - 8” |

*consult Icynene Engineering Department for details.

- Icynene MD-C-200 must be covered with ½” of gypsum board, DC-315 intumescent paint coating at 24 wet mils or approved thermal barrier.
- Icynene MD-C-200 is subject to all applicable National/State and County building codes regarding fire prevention. Requirements for Thermal Barrier and Ignition Barrier coverings must be met as per the applicable building code as required by the authority having jurisdiction.
- Icynene MD-C-200 per AC377 Appendix X test reporting is approved for use in limited access attics and crawl spaces without an ignition barrier or an intumescent paint coating.

AIR BARRIER/MECHANICAL VENTILATION

- Icynene MD-C-200 fills any shaped cavity, and adheres to most construction materials, creating assemblies with very low air permeance.
- Additional interior or exterior air infiltration protection is subject to applicable codes.
- All buildings insulated and air sealed with Icynene MD-C-200 must be designed to include adequate mechanical ventilation/outdoor air supply for optimum IAQ (Indoor Air Quality).
- For mechanical ventilation see ASHRAE Standard 62 –Ventilation for Acceptable Indoor Air Quality or any other acceptable good engineering practice.
WATER VAPOR PERMEANCE

- Icynene MD-C-200 is a Class II vapor retarder, at 1.6” thickness, which reduces the amount of moisture that can diffuse through the insulation.

INSTALLATION

- Icynene MD-C-200 is installed by a network of Licensed Dealers, trained in its installation.
- Icynene MD-C-200 can be sprayed up to 4 inches in one pass in either a full 4 inch lift or a combination of a 2 inch lift followed immediately by another 2 inch lift. For thickness greater than 4 inches, the above procedure can be repeated after 30 minutes or until the surface temperature drops below 90°F (32°C).
- This product should not be installed within 3” of heat emitting devices, (or as specified by Code) where the temperature is in excess of 180°F, in accordance with applicable codes.
- It can be installed in hot, humid or freezing conditions. Minimum substrate temperature for application is 25°F (-4°C).
- Surface preparation is generally not necessary.
- Within seconds, the foaming process is complete.

HANDLING AND SAFETY

AVAILABILITY

Contact Icynene Inc. at 800-758-7325 or visit our website at www.icynene.com.

WARRANTY

WHEN INSTALLED PROPERLY IN ACCORDANCE WITH INSTRUCTIONS, THE COMPANY WARRANTS THAT THE PROPERTIES OF THE PRODUCT MEET PRODUCT SPECIFICATIONS AS OUTLINED IN THIS TECHNICAL DATA SHEET. SAVE AND EXCEPT ANY EXCLUSIONS REFERENCED IN THE WARRANTY.

TECHNICAL

Icynene Licensed Dealers and Icynene Inc. provide support on both technical and regulatory issues. Architectural specifications in CSI 3-Part format and design details are available at our website at www.icynene.com.
Icynene spray foam insulation products have an excellent health and safety record spanning more than 425,000 projects over more than 25 years. Nonetheless, safe handling practices during and immediately following installation are required to eliminate the possibility of health effects from exposure to isocyanates. Asthma, other lung problems, and irritation of the nose and throat can result from inhalation of isocyanates. Direct contact with the skin and eyes can result in irritation. Different individuals will react differently to the same exposures; some will be more sensitive than others. Severe asthma attacks have been reported in some sensitized workers exposed repeatedly to isocyanates while not wearing proper protective equipment. Some reports indicate a reaction and sensitization can occur following a single, sustained occupational exposure to isocyanates without proper protective equipment above the OSHA permissible exposure limit. But sensitization might not occur immediately in some individuals. Consistent use of personal proper protective equipment to prevent exposure during spraying and within the 1 hour**-period after spraying is completed is critical to eliminating the health hazard. Once sensitization has occurred, a worker might not be able work safely with spray foam insulation again.

Sprayers, sprayer helpers, and anyone else present during spraying or within 1 hour** after spraying is complete: You must ventilate at levels prescribed on this page and must wear proper Personal Protective Equipment (PPE) at all times during spray, including full-body-coverage, chemical-protective clothing and a NIOSH-certified respirator with fresh air supply. While spraying and for 1 hour** after spraying is completed, no one must be allowed within 50 feet of the sprayed foam without wearing this type of PPE at all times. Adequate active, negative pressure ventilation (exhaust fans) of the job site must be in place during spray and for 2 hours** after spray is complete to allow for re-occupancy.

For installations of low VOC products Icynene Classic Ultra, Icynene OC No-Mix, Icynene ProSeal, Icynene ProSeal LE and Icynene ProSeal HFO in the United States only, re-entry of the job site is permitted after 1 hour** and re-occupancy of the job site is permitted after 2 hours** (4 hours for Icynene OC No-Mix) provided that ventilation rates are followed as recommended on this page.

Independent studies and third party toxicologist verification indicates that when the prescribed ventilation rates and periods are followed, Icynene spray foam insulation is safely cured.

### RE-ENTRY AND RE-OCCUPANCY PERIODS

Times based upon ventilating during and after a spray application.

<table>
<thead>
<tr>
<th>Ventilation Rate (Air Changes per Hour)</th>
<th>Re-entry period for sprayers, helpers, informed trade workers and contractors</th>
<th>Re-occupancy period for all others</th>

</tbody>
</table>

* Twelve (12) and four (4) hour re-entry for trades applies to all Icynene products sold in the United States.

** One (1) hour re-entry and two (2) hour re-occupancy applies only to low VOC products:
- Icynene Classic Ultra and ProSeal HFO at 10 ACH
- Icynene ProSeal / Icynene ProSeal LE at 40 ACH

*** One (1) hour re-entry and four (4) hour re-occupancy applies only to Icynene OC No-Mix at 20 ACH.
COMMITTED TO THE RESPONSIBLE USE OF SPRAY FOAM CHEMISTRY FOR OVER 25 YEARS.

Icynene spray foam insulation products have an excellent health and safety record spanning more than 425,000 projects over more than 25 years. Nonetheless, safe handling practices during and immediately following installation are required to eliminate the possibility of health effects from exposure to isocyanates. Asthma, other lung problems, and irritation of the nose and throat can result from inhalation of isocyanates. Direct contact with the skin and eyes can result in irritation. Different individuals will react differently to the same exposures; some will be more sensitive than others.

Everyone (other than Icynene-certified spray technicians) must vacate the job site, remaining completely out of the building or at least 50 feet away, while the spray is applied and for at least 2 hours* after spraying is completed to allow active ventilation of the job site and to ensure the foam chemicals are completely cured. No exceptions.

Independent studies and third party toxicologist verification indicates that when the prescribed ventilation rates and periods are followed, Icynene spray foam insulation is safely cured.

* For installations of low VOC products Icynene ProSeal and Icynene ProSeal LE in the United States only, re-occupancy of the job site is permitted after 2 hours provided that the rate of air exchange during spraying and for 2 hours thereafter equals or exceeds 40 Air Changes per Hour (ACH). For applications of low VOC Icynene Classic Ultra and ProSeal HFO in the United States only, re-occupancy is permitted after 1 hour provided rate of air exchange during and for 2 hours thereafter equals or exceeds 10 Air Changes per Hour. For applications of Icynene OC No-Mix in the United States only, re-occupancy is permitted after 4 hours provided rate of air exchange during and for 4 hours thereafter equals or exceeds 20 Air Change per Hour.

LOW
VOC

STAY OUT OF PREMISES WHILE FOAM IS BEING SPRAYED AND FOR 2 HOURS* AFTER SPRAYING IS COMPLETE.

* For applications of low VOC Icynene Classic Ultra, Icynene ProSeal, Icynene ProSeal LE and Icynene ProSeal HFO only with ventilation as prescribed.
